Real IT Certification Exam Study materials/Braindumps

**Exam** : **E22-214**

**Title** : VxFlex OS 2.x Server-Based  
SAN Exam

**Vendor** : EMC

**Version** : DEMO

**NO.1** Due to suspected hardware failures, a ScaleIO administrator wants to monitor one specific SDS and three ScaleIO devices for the next hour. Which ScaleIO GUI feature(s) will effectively address this requirement?

- A. Property Sheets
- B. Presets
- C. "Sort by SDS" and "Sort by Storage Pool" selectors
- D. Dashboard Tiles

**Answer:** A

**NO.2** An administrator who is running the ScaleIO 1.31 Installation Manager reviews the Packages view display. Which listed packages have a checkmark in the "Latest" column?

- A. Packages with matching version numbers as the Installation Manager
- B. Latest packages uploaded to the Installation Manager package directory
- C. Latest packages available from support.emc.com
- D. Latest packages currently installed in the ScaleIO cluster nodes

**Answer:** B

**NO.3** What accurately describes ScaleIO?

- A. Server-based SAN
- B. Cloud-ready object store
- C. iSCSI appliance
- D. Multi-protocol NAS

**Answer:** A

**NO.4** An administrator creates two volumes using the `scli --add_volume` command. The administrator uses the `-- size_gb 2` parameter for the first volume and uses the `-- size_gb 17` parameter for the second volume.

If the remainder of the command syntax is correct, what are the sizes of the volumes created by ScaleIO?

- A. One 4 GB volume and one 20 GB volume
- B. One 2 GB volume and one 18 GB volume
- C. One 2.16 GB volume and one 18.36 GB volume
- D. One 8 GB volume and one 24 GB volume

**Answer:** D

**NO.5** A ScaleIO administrator has re-configured the MDM to single mode. How will this affect the Dashboard view of the GUI?

- A. Management tile will display the changed state and an alert symbol
- B. Rebuild tile will be highlighted with an alert symbol
- C. Management tile will be dimmed
- D. No detectable effect on the Dashboard view will exist

**Answer:** A

**NO.6** When testing the integration of a ScaleIO cluster with an OpenStack cloud, the administrator discovers that creating a ScaleIO volume from the Horizon UI fails. You have verified that all required drivers and configuration files are in place in every node.

What is a possible cause for the failure?

- A.** Cinder node does not have IP access to the primary MDM
- B.** OpenStack Cinder service has not been restarted
- C.** Primary and secondary MDMs have not been restarted
- D.** REST gateway has not been configured with credentials for the OpenStack client

**Answer:** B

**NO.7** Which type of MDM deployment is typically used in a ScaleIO environment?

- A.** Primary and secondary MDMs, and the Tie Breaker in three separate servers
- B.** Single mode MDM, SDS, and SDC in three separate servers
- C.** One primary, one secondary, and two hot standby MDMs
- D.** Management host in which both primary and secondary MDMs are installed

**Answer:** A

**NO.8** How does ScaleIO implement REST API functionality?

- A.** Supplies a Python library that must be installed in every REST client that makes ScaleIO API calls
- B.** Provides a REST gateway to which clients can issue REST API calls
- C.** Adds a --REST command to the CLI
- D.** Embeds REST API call processing in the secondary MDM

**Answer:** B
